SECA Conference

Monday, 23 June 2025, 08.30 – 17.30

08.30 – 09.00: Registration / Networking / Welcome Coffee

Room Auditorium / in English / Moderation John Cook

Digital Transformation in the age of AI

Moving away from the past and into the future inevitably involves **risks, challenges, creativity** and **hard work**. Problem solving through innovation has been the calling of today's educated class and the result is value creation beyond what was ever expected. This could not be more true than in the exploding world of **AI, digital infrastructure** and **data centers**. Both at the micro (CEO) level and at the macro (industry) level, leaders and entrepreneurs from healthcare to manufacturing, from politics to space strive to set new standards, achieve new highs and create value through their time and talent. How have the following leaders created value through innovation and problem solving to address today's global digital challenges?
